

METAL FORMS CORPORATION
SINCE 1909

EMPLOYEE PROFILE

TONY ESPARZA **Production**

Tony began his career at MFC in 2021. He wanted to get back into the welding, fabricating and building equipment side of the construction industry. Tony's current role on the production floor is to read blueprint and drawings to take measurements and to plan layouts to determine what welding equipment and methods to use and what to set-up to prepare parts for welding.

When Tony was asked what he enjoys about working at MFC, he stated "It's a great working environment within a company that has been around for more then 100 years. The collective experience on the shop floor is immeasurable. The Supervisors and people from the office are very professional. I could not be in a better place."

When Tony is not hard at work he like to stay as active as possible. Archery, cross-fit and a little hiking and soccer. But, above all else, he enjoys his family time with his wife and children. Always finding something to do together every weekend.
