VIBRATORY SCREEDS

VIBRATORY SCREEDS

Speed Screed® offers two vibratory concrete finishing machine models: Heavy Duty™ and Cruiser™ to satisfy all concrete construction finishing job demands. Our Heavy Duty™ concrete finishing model is designed for high production, low slump paving operations. Our Cruiser™ model is our most popular concrete finisher for all types of finishing projects.

Our Vibratory Truss Speed Screed® feature reversible aluminum square tubes – giving you twice the life on the screed surfaces. Additionally, the Speed Screed® surfaces are easy to clean, saving you time and labor.

Strategically located eccentric weights, in combination with aluminum tubes, supply even, deep and intense vibrations that penetrate directly into the concrete over the entire length of the pour.

CRUISER™

Our most popular model for all type of finishing projects.

- 11 lbs per lineal ft
- 5 hp or 8 hp Honda engine
- Square 2" finishing tubes
- Widths up to 60 ft

HEAVY DUTY™

Designed for high production, low slump paving operations.

- 20 lbs per lineal ft
- 8 hp or 13 hp Honda engine
- Square 3" finishing tubes
- Widths up to 65 ft
